

National Severe Weather Warning Service

Chief Forecasters Assessment

Areas of heavy showers and thunderstorms are expected to develop over France on Saturday and then move northwards to affect many parts of eastern and northern England and southeast Scotland early on Sunday. Although there remains some uncertainty concerning the extent of these heavy showers and thunderstorms, there is an increasing signal for an area of heavy rain with isolated thunderstorms to move north to affect eastern and northern England and southeast Scotland. Some heavy thundery rain continues to be expected to affect East Anglia however the risk of severe thunderstorms giving frequent lightning, torrential rain and squally winds during the early hours of Sunday has now reduced. Rainfall amounts will vary considerably, but there is again scope for 30 mm of rain to fall within an hour and 50 mm or more in less than 3 hours.

The Met Office have issued a **Yellow Warning of Rain**

Valid from **00:05 on Sun, 28th Jul 2013** until **14:00 on Sun, 28th Jul 2013**

Areas of heavy, thundery rain will continue to move north across England and then into southeastern Scotland early Sunday. It will then clear from the southwest although lingering across the far north of England and SE Scotland until early afternoon.

The public should be aware of the risk of localised disruption, mainly due to surface water flooding.

This is an update to the warning issued yesterday extending the warning into SE Scotland.
